

FOR IMMEDIATE RELEASE
Houston Texas, Feb. 16. 2011

NEW OWNERSHIP AND A NEW BEGINNING announced for KMS Technologies - KJT Enterprises.

Dr. Kurt Strack, CEO of KMS says, "There is a new enthusiasm and excitement at KMS resulting from the change in ownership effective Feb 14, 2011 by which the common shares formerly owned by RXT and EMGS were transferred back to KMS. Prior to the change, many of the KMS projects progressed slowly. Now with centralized ownership, we will deploy our technology faster and focus on its core businesses of electromagnetics for exploration of land, marine borehole, reservoir monitoring and logging. KMS will focus first on land electromagnetics technology where it has just delivered the company's newest generation magnetotelluric systems to China and India. KMS will also continue to develop its technology with a sub-salt and sub-basalt focus. Next KMS will be looking for partners to revive its marine reservoir monitoring and geosteering technology projects. KMS has a new and bright future."

About KMS Technologies:

Formed in 1999, this award-winning Houston, TX, company counts among its staff a host of world-recognized, award-winning experts in geosciences. Most staff members have at least 20 years industry experience developing new, commercial, geophysical systems. They make up a formidable multi-cultural, multi-lingual, multi-disciplinary team. Some of the disciplines involved include Geology, Geophysics, Electrical Engineering, Mathematics and Petrophysics.

KMS Technologies pioneered technologies for geosteering, mud logging, marine EM, and land EM and hold over 20 US patents with wide geographic coverage.
