KMS launches geophysical rental service to customers

Houston, Texas, USA – September 19 2012 – KMS Technologies – KJT Enterprises Inc. is pleased to announce today that they are offering customers more ways to use their products. KMS has launched a rental service for their equipments and also rent-to-own scheme. This new service underscores the company focus which is to meet customer's need.

“KMS has raised another bar unlike any other in the geophysical industry. We believe in alternatives and options for our customers to have access to our equipments. Our clients have their own requirements to meet their goals and that does not mean they have to choose to purchase the equipments just for a short-term project” said Kurt Strack, the President of the company.

KMS has seen an increasing trend in the rental demand from the customers for the past few months. The company believes this new service will not only beneficial to the customers' need but also as an additional growth to the industry. This mode of service also widens KMS array of customer's spectrum. The equipment rental is available to domestic customers and selected international clients. Please visit KMS website to learn further about the rental service.

The new system which dubbed as “Portable EM” by World Oil Magazine in May 2011 issue highlights some compelling features such Wi-Fi ready, MESH configuration with self-healing feature, as GPS-synchronized, unlimited channels, wireless control capability, 24-bit A/D resolution and up to 100 KHz sampling rate.
